RESEARCH PROJECTS

Extending storage systems to meet cloud needs | Seagate Technology & SyLab (FIU)

August 2021 - Present

- Designed TxFuse, a novel architecture, to extend a distributed storage system with plugins and improve performance and efficiency.
- Developed transactional coupling and reliable notification techniques to implement storage features such as encryption and compression.

A distributed cache for cloud data centers | SyLab, ModLab, DAMRL (FIU) & HASLab (UMinho) May 2020 - Present

- Designed and implemented CaaS, a novel, distributed, and generalized cache for cloud computing infrastructures using novel QoS algorithms.
- Improved hit rates, data center services, and microservices with a distributed cache that unifies cache resources for reading and writing.

ML systems for caches in the cloud | SyLab, ModLab, BioRG (FIU) & VISA (ASU)

August 2018 - February 2021

- Developed ML algorithms LeCaR and CACHEUS to improve cache hit rates compared to classic cache replacement algorithms for the cloud.
